

INVESTING IN THE ENERGY TRANSITION

The Energy Transition Series

OVERVIEW

Be at the forefront of Europe's energy transition. Join the 2nd edition of Investing in the Energy Transition – the intersection of financing and technologies in Milan.

This is your opportunity to take a deep dive in key themes driving the European energy transition. From Italy's booming energy market to pan-European pipelines, Investing in the Energy Transition promises actionable insights, networking opportunities, and thought-provoking discussions, helping to spark new connections and deal pipelines.

WHAT TO EXPECT

We'll be dedicating the first day to the Italian market. Expect to receive insider updates on the latest financing and regulatory developments as well as a comprehensive outlook on the country's growing financing and development pipeline.

Expand your horizons with pan-European discussions covering next-generation technologies like hydrogen, floating offshore wind biofuels, battery storage and more. Take a deep dive into the latest financing structures, and hear from developers, lenders, and industry experts to identify the latest investment opportunities.

Network with over 250+ c-level and decision making individuals ranging from all corners of the industry. From financiers, developers, institutional investors, project sponsors, utilities, and government representatives. Don't miss your chance to forge new relationships and be a part of the conversations shaping the future of the European energy transition. Register your interest today.

WHY ATTEND

- **Cutting-edge discussions:** Dive into the latest updates in the sector from evolving financing structures to technologies like battery storage and floating offshore wind.
- **Dynamic formats:** Engage with industry leaders and experts as they address the latest challenges and opportunities in the industry.
- **Emerging technologies deep dives:** Gain unique insights into country markets, from Spain's regulatory landscape to Chile's investment profile dominance and navigating LatAm's tender processes.
- **Networking opportunities:** Connect with decision-makers. Our interactive sessions and custom networking-app are designed to help forge lasting connections.
- **Future-oriented:** Be at the edge of Europe and LatAm's energy transition and play your role in it.

INVESTING IN THE ENERGY TRANSITION

The Energy Transition Series

2025 AGENDA THEMES

The Financing evolution: Traditional vs. alternative lenders – we'll be exploring the growing role of debt funds, private credit, and commercial banks. Which structures can each of these institutions provide related to project risk profiles, flexibility, and innovation? Does the market expect an increase in portfolio and mezzanine financing for renewables?

Battery storage takes the spotlight: BESS is a pivotal role transitioning from pilot projects into grid-critical infrastructure. With MACSE auctions in Italy, combined with co-location of renewables, how will this asset class play an instrumental role in ensuring grid stability?

The future of biofuels: Italy possesses strong feedstock sustainability frameworks positioning the country as a leader in the biofuels sector. How are market players navigating securing long-term offtake agreements and supply chains?

Developers' spotlight: How difficult is it to build a strong offtake case as well as finding the right partners with ample market know-how?

Two peas in a pod: Co-location steals the show – has co-locating assets alongside BESS become the norm to improve value and stable revenues? Addressing how to minimise revenue cannibalisation

Beyond traditional renewables: How can next-generation technologies garner the support they need from governments and industry early-movers? How are they managing higher costs associated with technologies in the early stages
